

Lesson 2 Engineering

Making Slime

Material:

¼ cup White School Glue

1 TBLS Water

¼ cup Liquid Starch

Instructions:

1. Pour ¼ cup glue into a large bowl. Add 1 TBLS water and stir until combined.
2. Add ¼ cup liquid starch and mix until thick and slimy. Then knead the slime with your Hands and return to the starch mixture for another mixing. This is important because it Make sure there is no unmixed glue hiding in the middle of the slime ball. If slime is Sticky, add additional corn starch, a little at a time, and knead until not sticky anymore. Most batches will use almost all of the starch.
3. Store slime in a glass or plastic container with a lid for up to one month.
4. Have fun playing with your slime!
