

# Lighting

Lighting is one of the most important things to pay attention to when you are making a video. Your goal in this lesson is to figure out what different lighting does to your film. Decide on something you want to film and then film it with all different types of light. Try it under your kitchen lights, in a not very lit hallway, outside with the sun behind you and again with it in front of you, with a flashlight on the side of your face, and any other way that you can think of. What do the different lights do to your video? Which lighting is best? Does it depend on what kind of story you are trying to tell?
